SINGLE-FAMILY HOME FIXTURE COUNT	
Sizing of the single-family residential meter is based upon the fixture count which is based upon Appendix B of the latest edition of the NJ Plumbing Code. The fixture count is used to calculate the gallons per minute (gpm) which is then used to determine the meter size.	
Fixture Type	Quantity
Full bathrooms (toilet, sink and shower/tub)	
Half-bathrooms (toilet and sink only)	
Kitchen with Sink and Dishwasher	
Laundry with Sink and Clothes Washer	
Additional Sinks of any type	
Hose Bibbs (outdoor fixtures)	
Additional water using fixtures not listed above - describe below:	
Irrigation: Enter estimated GPM for max. zone (if applicable) ⁽¹⁾	
⁽¹⁾ Irrigation is not added to the fixture count because it is assumed that irrigation is used between 12pm and 6am when other fixtures are not being used. This is to determine if the irrigation demand exceeds the sized meter.
